

UNIVERSIDADE FEDERAL DE PERNAMBUCO DEPARTAMENTO DE ESTATÍSTICA

Primeiro Exercício – PROVA TIPO B – (ET657) PROBABILIDADE 2 PARA ATUÁRIA – 2020.2

Turma: 2P Professor: Roberto Ferreira Manghi Data: 21/06/2021

 $\mathbf{ATENC ilde{A}O}$: As respostas devem estar acompanhadas dos cálculos, respostas sem cálculos serão anuladas.

 1^{0}) (3,0 pontos) O raio (em cm) de esferas produzidas para rolamentos é uma variável aleatória contínua $R \sim Beta(2,2)$, com densidade $f_{R}(r) = 6r(1-r)$, com $r \in (0,1)$. e zero, caso contrário. Esferas com raio abaixo de 0,2cm e acima de 0,8cm são descartadas na produção.

- a) (1,5 ponto) Calcule a probabilidade de uma esfera produzida não ser descartada.
- b) (1,5 ponto) Em um lote de 100 peças produzidas, aproximadamente quantas serão descartadas?

 2^{0}) (3,0 pontos) O tempo (em anos) de duração de um componente eletrônico é uma variável aleatória $X \sim Exp(1/10)$, com função de densidade dada por $f_{X}(x) = \frac{1}{10}e^{-x/10}$, x > 0. O quantil de ordem p, em que $p \in (0,1)$ é definido como o tempo de duração de $p \cdot 100\%$ das peças produzidas, ou seja, é o tempo t_{p} tal que $P(X \le t_{p}) = p$.

- a) (1,5 ponto) Obtenha uma expressão para o quantil de ordem p, dado por t_p , em função do valor de p.
- b) (1,5 ponto) A partir do item (a), fixe p = 0,5 e obtenha o valor do tempo mediano $t_{0,5}$.

Dica: $ln(0,5) \approx -0,693$.

 3^{0}) (3,0 pontos) Suponha que as notas de uma turma de Probabilidade 2 seguem uma distribuição normal. Sabendo que:

- 84,13% dos estudantes obtiveram notas superiores a 6,0;
- 97,72% obtiveram notas inferiores a 9.0.
- a) (1,5 ponto) Obtenha o valor médio e o desvio-padrão das notas desta turma.
- b) (1,5 ponto) Qual a probabilidade de um determinado estudante apresentar uma nota abaixo de 7,0?

 4^{0}) (1,0 ponto) A demanda diária de arroz num supermercado, em centenas de quilos, é uma variável aleatória X com função de densidade de probabilidade

$$f_X(x) = \begin{cases} 2x/3, & \text{se } 0 \le x < 1; \\ -x/3 + 1, & \text{se } 1 \le x \le 3; \\ 0, & \text{se } x < 0 \text{ ou } x > 3 \end{cases}$$

Obtenha a demanda diária média e o desvio-padrão da demanda diária de arroz (em centena de quilos) neste supermercado.

Standard Normal Probabilities

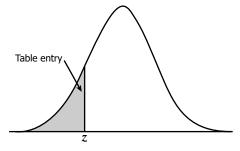

Table entry for \boldsymbol{z} is the area under the standard normal curve to the left of \boldsymbol{z} .
